A Fine-Tuned Universe will contribute significantly to that discussion by developing a rich Trinitarian approach to natural theology that allows deep engagement with the intellectual and moral complexities of the natural world. It will be essential reading to those looking for a rigorous engagement between science and the Christian faith.

accepted revision, reviewed on 6 December 2020. The hypothesis that life in the Universe depends upon certain physical constants having values within a narrow range and the belief that the observed values warrant an explanation. The characterization of the universe as finely tuned suggests that the occurrence of life in the Universe is very sensitive to the values of certain fundamental physical constants and that the observed values are, for some ...

And Our Existence Is ...~~

Fine-tuning, as it applies to the universe, is the idea that conditions essential for life to exist in the universe can occur only when certain universal physical constants and forces lie within a very narrow range of values. If any of them were to differ slightly, then our universe would be unlikely to be conducive to the establishment of life.

~~Fine Tuning of the Universe—Secrets Unlocked~~

The universe is also fine tuned to the extent that there is just enough nucleons (protons and neutrons) to form the elements essential for life. After the “big bang”, all of the galaxies and stars that make up the universe today were form from left over nucleons from this initial singularity.

Alister McGrath seeks to recover a vision for natural theology that is 'both securely rooted in the long tradition of Christian theological reflection and adequately adapted to our understandings of the natural world'.

In particular he argues for a distinctively Christian approach to natural theology grounded upon the doctrine of the Trinity.

The "Fine Tuning" of the Universe
"Fine-tuning" refers to various features of the universe that are necessary conditions for the existence of complex life.

List of Fine Tuning Parameters | Discovery Institute

Strong evidence for a Designer comes from the fine-tuning of the universal constants and the solar system, e.g. The electromagnetic coupling constant binds electrons to protons in atoms. If it was smaller, fewer electrons could be held. If it was larger, electrons would be held too tightly to bond with other atoms.

~~The universe is finely tuned for life—

Recent Studies have confirmed the fine tuning of the cosmological constant (also known as "dark energy"). This cosmological constant is a force that increases with the increasing size of the universe. First hypothesized by Albert Einstein, the cosmological constant was rejected by him, because of lack of real world data.

Scientists of all worldviews agree that the physical constants of our universe and the conditions of the early universe are exquisitely fine-tuned for life. Multiple theories in physics predict that our universe may be one of very many, an idea known as the multiverse. Some Christians argue that

This concept differs from the static version of natural theology of the past , via Paley, and harmonizes with both the scientific and theologic understanding of the cosmos.

Examples of fine tuning of the universe are significant anthropic phenomena that are given their explanation and meaning through a theologic platform that makes the most sense.
