CDC | Bioterrorism Agents/Diseases | Emergency ...

Bioterrorism agents are pathogenic organisms or biological toxins that are used to produce death and disease in humans, animals, or plants for terrorist purposes. These agents are typically microorganisms found in nature, but it is possible that they could be modified to increase their virulence, make them resistant to current antibiotics or vaccines, or to enhance the ability of these agents to be disseminated into the environment.

Potential Bioterrorism Agents - BCM

Anthrax is an infectious disease caused by the spore-forming bacterium, Bacillus anthracis. ... Bioterrorism is the intentional use of biological agents, or germs, to cause illness. Bioterrorism has occurred in New York only in 2001, when media outlets received letters that were intentionally contaminated with anthrax bacteria.

Biological Emergencies: Anthrax - NYC Health

Bioterrorism is the deliberate release of viruses, bacteria, toxins, or other agents to cause illness or death in people, animals, or plants. According to experts, the threat of global bioterrorism is increasing. In October 2001, bioterrorism became a reality when letters containing powdered anthrax were sent through the U.S. Postal Service. The attack caused 22 cases of illness, 5 of which resulted in death, and widespread fear.
