In part 1, the by now classical spectral theory of Banach \ast -algebras is developed, including the Shirali-Ford Theorem (17.14), which is less common for an introduction. In part 2, the theory of states on a normed \ast -algebra is exam-ined, stripped of the usual assumptions of completeness, presence of an approximate unit, and isometry of the involution.

We begin with an introduction to real Cli ord algebras and the connection to normed division algebras and braids. We then introduce the tensor construc-tion of the complex Cli ord algebra, develop the ideas of root systems and weights of Lie algebras, and construct the spinor module of a Lie algebra from a Cli ord algebra. Contents 1. Introduction 2 2. Cli ord Algebras over R and Multivector Subspaces 2 2.1. Cli ord Algebras over R 2

1 Introduction to normed algebras and Banach algebras Banach algebras may be thought of as Banach spaces with multiplication (in a sense made more formal below). The additional structure provided by the multiplication gives the theory of Banach algebras a rather di erent avour from the more general theory of Banach spaces.
