What to do: Take a clean seed tray or other suitable flat container such as an old lunchbox or ice-cream container Put 1-2cm of compost into your chosen tray (peat-free is more expensive but much better for the environment) Moisten the compost with a spray or gentle watering can Sprinkle seeds on ...

Microgreens - How to Grow Astronaut Food at Home  
Microgreens are termed that after they have produced at least two "true" leaves after the cotyledons appear. Cotyledons begin as part of the embryo within the seed of a plant. In dicotyledonous plants they produce two kidney-shaped "seed" leaves, the first leaves to appear. True leaves, by contrast, develop from the plant stem.

How to Grow Microgreens from Start to Finish (COMPLETE ...  
Microgreens are immature plants that you harvest just the leaves and stem from, leaving the roots behind. You can grow microgreens without soil, but we recommend growing them in soil here just for ease. With microgreens, you focus on sprouting greens that you would usually eat—you just do it on a mini-scale.

How to Grow Microgreens Indoors | Gardening | Wholefully  
Microgreens, on the other hand, require a combination of growing in the dark, prior to exposing them to light (daylight or artificial light). Harvesting microgreens usually occurs somewhere between 7-21 days after germination, depending on the variety of seeds that were sown.

How to Grow Microgreens [Ultimate Guide] — Microveggy  
Microgreens grow best in temperatures ranging from 15-21 degrees celsius with sufficient sunlight. Wilting plants can indicate underwatering. Make sure that your grow pads are soggy and not just damp. On the other hand, rotting plants can indicate overwatering.
